

Test Factory Solution

Why your organisation needs this service

- You require more flexibility with your software testing in terms of cost, and availability of resource
- The business needs to reduce cost with improved processes and reduced head count
- You want the option of buying separate components of software testing, without the need for management overhead
- You want access to cloud based testing

Service overview

Our Test Factory solution works by utilising specialist skills to more effectively complete repeatable services. It reduces management overhead and provides flexibility of resources which can be ramped up or down at short notice.

If you don't need consultancy services there is the option to just purchase specific artefacts or outputs at a fixed price.

By procuring services within our Test Factory, you will benefit from knowledgeable resources which specialise in creating testing products for similar projects, thus reducing the production time. The cost model means that you are charged based on the number of products purchased from the factory rather than the time taken to produce them.

Our factory tends to be cloud based with our testers generally home based or located around the globe only travelling to client sites when necessary. This greatly reduces your costs when compared to a more traditional testing service provision.

Benefits

- Productised delivery
- Cost certainty
- Minimum investment
- Tailored Test Factory approach
- Ensures that testing costs are kept to a minimum
- Our solution is cost effective, as you can 'pick and choose' your testing products, as and when you need them
- Our Test Factory solution can offer scope in terms of testing in different environments, devices and other variables

Why Capita?

- Wealth of experience put into Test Factory resources
- Using a large number of our testers to test software simultaneously reduces test cycle time, resulting in a quicker time to market
- We have established partnerships with leading test tool providers
- We tailor our solutions to fit your organisation's requirements, rather than adopting a "one size fits all" approach
- Experienced professional test team
- Extensive sector knowledge
- Wider expertise to cope with application interfaces and integration
